

# Making Classrooms Inclusive

We focus on the classroom environment itself as our client, not individual children. Our recommendations target the overall setting—classroom flow, daily schedule, activities, the physical space, and teacher strategies—to create an inclusive atmosphere that supports every child now and in the future.

Step 1: Teacher completes a form that provides us with the information we need prior to the on-site observation.

Step 2: Pediatric Occupational Therapist comes on-site to observe the classroom and the student (s) for whom the school aims to make the classroom more inclusive.

Step 3: The OT will provide the teaching team with a report that includes strengths and recommendations.

Step 4: The teaching team can schedule a 1 hour Zoom consultation with the OT to review and clarify the content in the report.

*"There are countless ways to modify a classroom environment to meet the needs of diverse children. With the expertise of a pediatric occupational therapist, teachers gain valuable insight into making small but impactful changes to both the physical space and the relational milieu."*

\$850 per classroom
